May 2-4, 2017 | Tulsa, Oklahoma

ABOUT YOUR INSTRUCTOR

MICHAEL R. WALLS, PhD

is a professor and the Director of the Division of Economics and Business at Colorado School of Mines. He received his BS from Western Kentucky University and both his MBA and PhD in Management from the University of Texas at Austin. He has extensive experience in risk assessment and management including decision analysis, strategy, strategic planning and technology commercialization. He is a frequent lecturer of short courses to industry, and has published a large number of papers and articles for professional journals.

Today's petroleum exploration and production firms are in an increasingly competitive and risky business environment. Managers find they need to adopt better and more systemic decision-making processes that explicitly embody the firm's objectives, desired goals, and resource constraints. They are regularly confronted with the issue of allocating scarce capital among a set of available exploration, development and acquisition opportunities — characterized by a high degree of financial risk and uncertainty. Therefore, firm managers must focus on the value their corporate and business level strategies are creating.

This two-and-a-half day course is a practical, hands-on approach to modern techniques in risk management and strategic decision-making. The techniques presented are applicable to all aspects of petroleum exploration and production including prospect evaluation, resource allocation, diversification, risk sharing and corporate planning.

The instructor, Dr. Michael R. Walls, will present an advanced set of decision science and strategy techniques and demonstrate how to implement these techniques in your own E&P business to enhance the value of the company.

PROGRAM CONTENT

- Modeling and structuring complex exploration and production decisions
- Decision analysis: utilizing influence diagrams and decision trees
- Applications of decision and risk analysis to the petroleum sector
- Value of information concepts, applications to exploration and production setting
- Value of sensitivity analysis and Monte Carlo simulation in exploration and production
- Overview of modern finance concepts and investment analysis
- Portfolio management: models and applications in the exploration and production sector
- Conventional vs. unconventional plays — risk challenges
- Corporate financial risk tolerance and exploration and production decision-making
- Implications of exploration and production corporate risk taking and performance
- Incorporating multiple performance objectives into analysis
- Integration — working to improve performance

WALK AWAY KNOWING...

- ▶ The characteristics of strategy and capital
- ▶ How to most effectively apply an advanced set of decision science and strategy techniques to your situation
- ▶ The importance of risk-sharing and diversification in project selection
- ▶ How to measure, manage and control financial risk
- ▶ The performance implications of your firm's risk taking actions
- ▶ How to act on your exploration and production business strategy through the capital allocation process

Immediate Benefits of Attending ...

- Apply risk assessment and analysis techniques to your specific business situation
- Incorporate multiple exploration and production objectives into your risk analysis and decision-making process
- Employ state-of-the-art asset and project evaluation techniques
- Utilize a portfolio analysis approach to allocating resources
- Provide managers clear guidance on making choices among risky project opportunities
- Measure the value of seeking additional information before you pay for it
- Organize objectives into a systematic framework to evaluate investment alternatives
- Measure, interpret, and implement your firm's unique risk tolerance
- Demonstrate how exploration and production decision-making can create value for your firm
- Identify and generate new decision opportunities for improving exploration activities
- Develop concepts and techniques you can apply to your job today

Who Should Attend

Do you need an overall perspective of petroleum exploration, drilling, and production in order to be more productive at your job? If so, this seminar is for you! Past participants have included petroleum exploration managers, geographical and geophysical managers, economics and planning personnel, financial analysts, project evaluation personnel, oilfield services sales and technical support staff, finance directors, corporate executives and senior management responsible for corporate risk activities, bankers responsible for petroleum financing activities, representatives from oil ministries responsible for resource development.
