

Case Studies of Particle Imaging Technology for Differentiating Particles in Produced Water

Kent Peterson

Fluid Imaging Technologies, Inc.

kent@fluidimaging.com

Outline

- **What is Dynamic Imaging Particle Analysis?**
- **Examples of Particle Imaging for Calculating Oil and Solids in Produced Water.**
- **Limitations and Best Cases for Using Particle Imaging in Produced Water**
- **Questions**

What is Dynamic Imaging Particle Analysis?

- **“Automated Microscopy”**
- **Sample is Moved Through Optical Path “Dynamically” & Imaged in Real-Time**
- **Large Number of Measurements/Particle Enables Differentiation by Shape**
- **“Shape Filters” Automatically “Bin” Particles Into Different Types**
- **High Quantity of Particles Measured Yields Higher Statistical Confidence**

How It Works

Flow Cell View

FlowCam[®] Overview

- **Collects size, shape, and count data upwards of 50 particles/frame at 20 frames/second (~60,000 particle/min)**
- **Allows query and examination of individual particle microscopic images and associated morphology**
- **Wide particle size range of 5 μ m-2mm**
- **Low sample volume (usually a few ml)**
- **Total Magnification from 20x to 200x**

FlowCAM Models

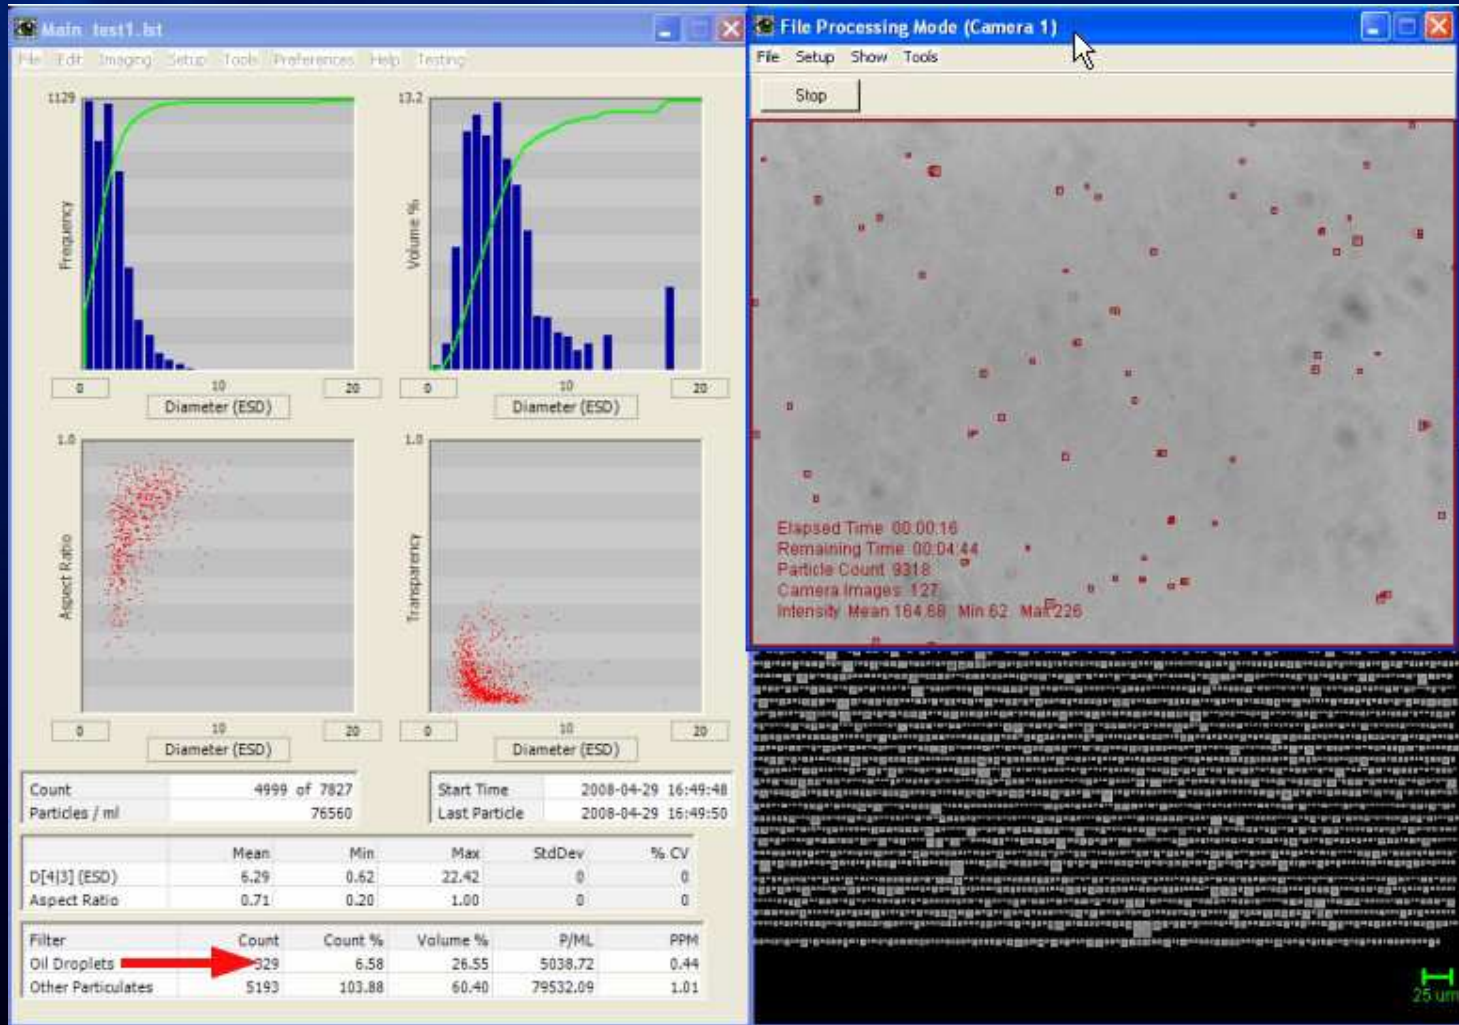

Benchtop

Portable

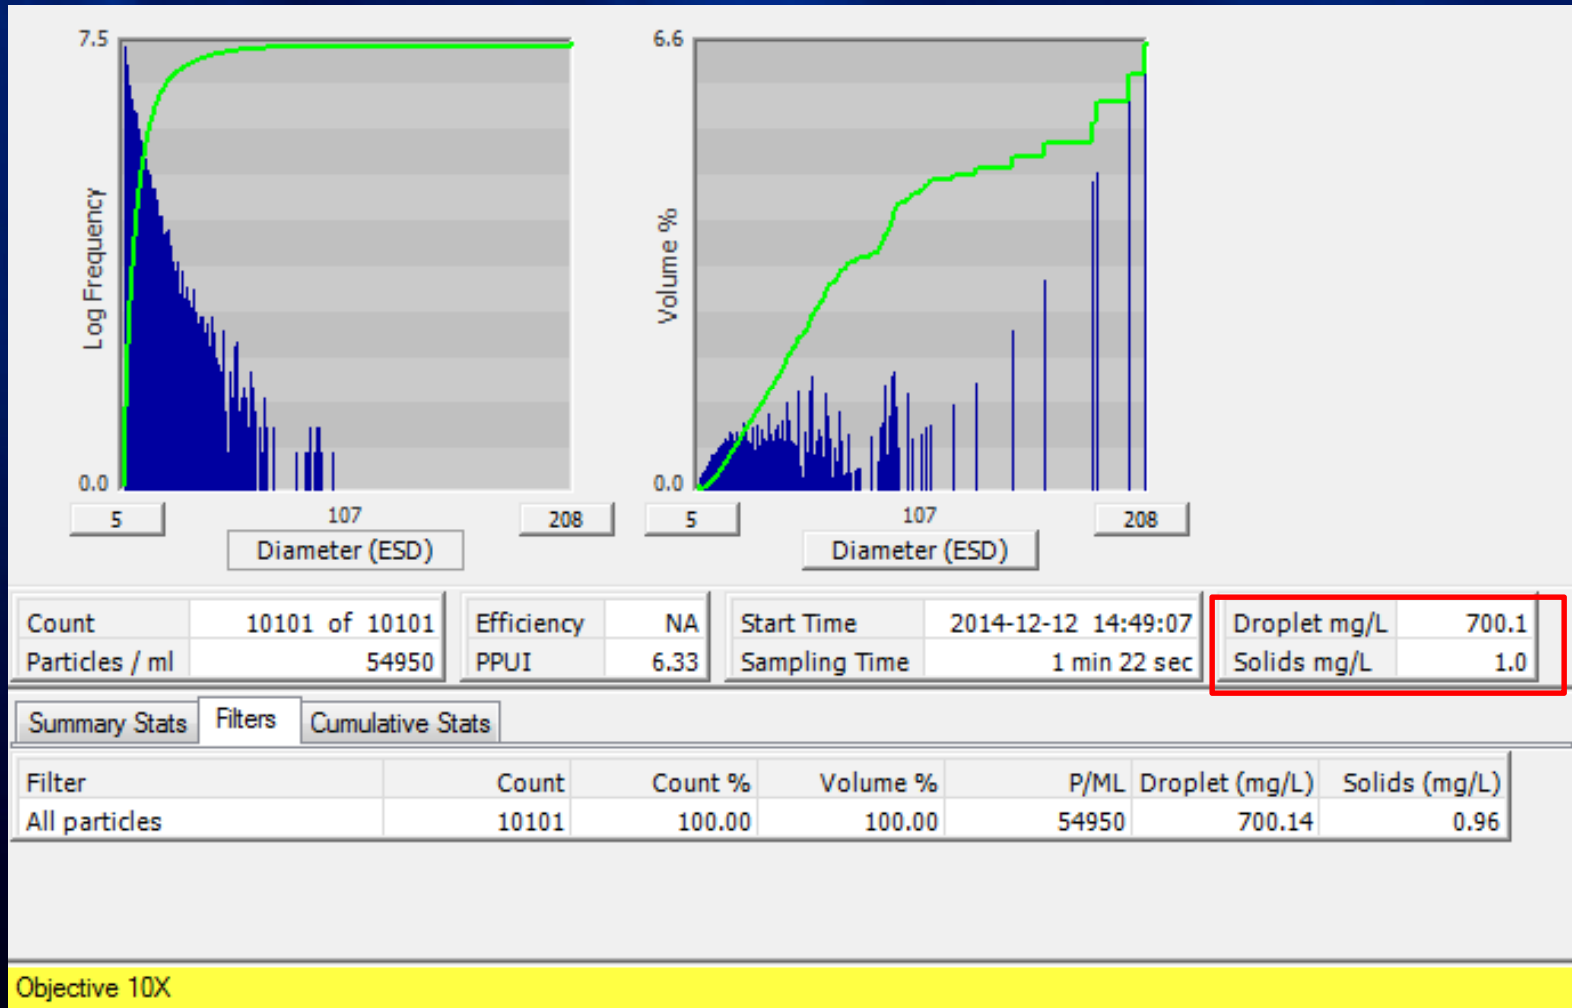

How It Works

Imaging Mode

Ideal Case

Just Oil in Water

Set Droplet & Solids Densities

The image shows a software dialog box titled "Droplet Density" with a close button in the top right corner. The dialog is divided into two main sections: "Specific Gravity" and "Calibration".

Specific Gravity

Droplet:	0.850
Solids:	2.7

Calibration

Percent Cell Depth Imaged:	45.0%
----------------------------	-------

At the bottom of the dialog, there are three buttons: "OK", "Apply", and "Cancel".

Ideal Case

Only Oil Droplets in Water

Real Case Has Solids

Need to Handle Solids Too

But What About Agglomerated Oil Droplets?

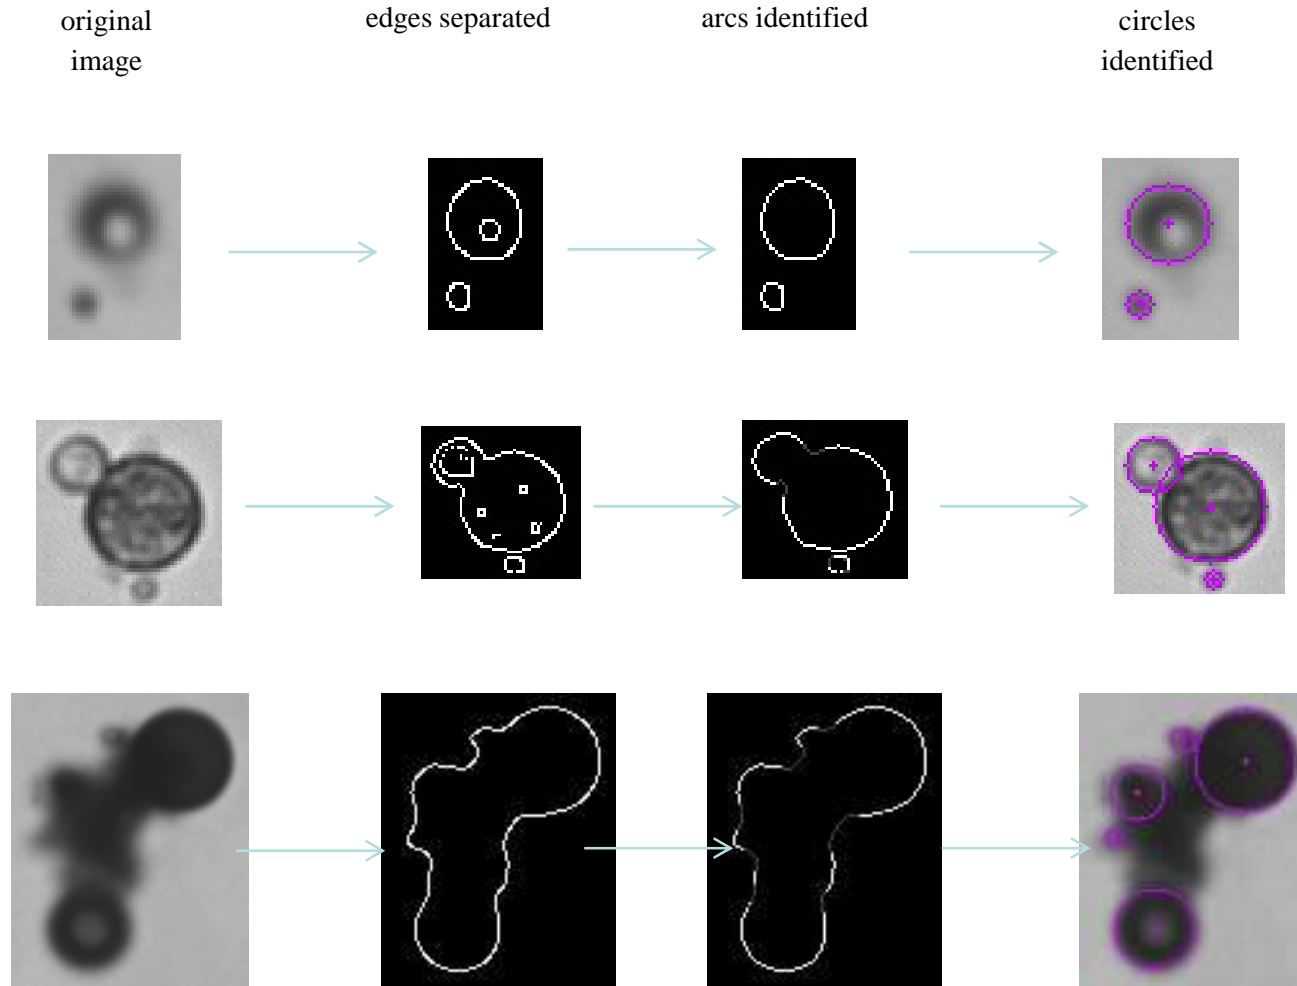

Oil Droplets Can Also Adhere to Solids or to Each Other

How to Handle Agglomerated Oil Droplets

- **Methodology Used:**
 1. **Detect Full Particle Image**
 2. **Detect Edges on Image**
 3. **Identify Circular Arcs**
 4. **Fit Circles to Arcs**
 5. **Calculate Spherical Volume of Each Circle**
 6. **Left over material is TSS**

Example of Method

Example: Single Droplet

Sphere Complement	0.00
Sphere Count	1
Sphere Volume	4200.11

Example: Oil Agglomerate

5157

Sphere Complement	1196.47
Sphere Count	14
Sphere Volume	743.12

Texas A&M

Tishomingo Field Study

- **Raw Water Feed**
- **Highly Agglomerated**
- **Average of Three Runs**

Texas A&M Tishomingo Field Study

Texas A&M

Tishomingo Field Study

- **FlowCAM**
 - 25 mg/L oil
- **Independent Lab Analysis**
 - 35 mg/L oil

Canada

Heavy Oil Field Study

- **Evaluated Thee Production Areas**
- **Highly Agglomerated**
- **Average of Three Runs**
- **Compared to UV Methods**

Production Pads #1 & #2

Production Pad #1

Skim Tank Outlet

37,000 p/ml

Production Pad #1

Skim Tank Outlet

- FlowCAM
 - Oil – 9 mg/L
- UV Oil
 - 20 mg/L

Production Pad #1

Flotation Unit Outlet

1,600 p/ml

Production Pad #1

Flotation Unit Outlet

- FlowCAM
 - Oil – 0.6 mg/L
- UV Oil
 - 1.7 mg/L

Production Pad #2

Skim Tank Outlet

- FlowCAM
 - Oil – 17 mg/L
- UV Oil
 - 7 mg/L

45,000 p/ml
15 um D50

Production Pad #2

Flotation Unit Outlet

18,000 p/ml
8.4 um D50

- FlowCAM
 - Oil – 3 mg/L
- UV Oil
 - 3.5 mg/L

Production Pad #3

Production Pad #3

Flotation Unit Outlet

- **FlowCAM**
 - Oil – 1.5 mg/L
- **UV Oil –**
 - 5 mg/L

3,900 p/ml
40 μ m D50

Production Pad #3

Filter Unit Outlet

800 p/ml
40 um D50

- FlowCAM
 - Oil – 0.6 mg/L
- UV Oil
 - 5.6 mg/L

Limitations of FlowCam Method

- **Look at droplets down to 5 μm**
- **Works best on suspended oil droplets rather than on globs of free oil where sample is not so saturated that oil droplets are clearly visible**
- **Can be used for oil in water or water in oil**
